Ideation Phase
Define the Problem Statements

I am	farmer
I'm trying to	Monitor different parameters of field like soil moisture, humidity, temperature and to water the crop when I am not near the field
But	It is hard to maintain the accuracy and to get constant update of data.
Because	Climatic conditions changes rapidly and it is necessary to have a close monitoring of these factors to prevent the fields.
Which makes me feel	That using of sensors for monitoring different parameters and using web or mobile applications and a system which
